**Subject:** RE: IDW drums at Tower Standard

These drums are on the Kozak's property? Seems a shame to have to go out to move them which requires a \$1000 mobilization.

PLEASE NOTE THE EPA AND CONTRACTORS ARE RECEIVING THIS EMAIL

Bob,

Just to let you know, I've arranged with SGS Environmental to go to the site tomorrow (Tuesday August 9) to move those drums over to the pad. They may even haul off some or most of the drums to their own yard and store them for us until we get analytical.

The good news is the additional cost is going to be minimal, an extra \$950 for a second mobilization beyond what was planned.

Let me know if you have any other questions,

--Matt

**Subject:** IDW drums at Tower Standard

Christine,

An issue has come up at the Tower Standard site. I was contacted this morning by the site owner, who informed me that the IDW drums on site property are placed over the septic system for the site building. Although the building is not currently in use, the septic system lies very close to the surface and he is concerned that the weight of the drums may damage it. The drums contain soil and water from the drilling activity.

Based on this information, we need to have arrangements made as soon as possible for the drums to be moved to a location about 100 feet from where they are currently sitting, as we wait for the waste characterization samples to be analyzed and the drums picked up for disposal by a subcontractor. The final work plan identifies SGS Environmental Contracting as the subcontracted waste hauler. This activity was not anticipated and is not included in the cost estimate from BERS for the task order.

I will leave a message for Matt Faust and ask that he contact me so we can set up a call to discuss the quickest way to have this resolved.

Thank you.
